Catalogue Symbols Guide

Test Sire
Elite genomic test sires, not proven for calving or field fertility.

New
New sires available.

Heterozygous Polled
At least 50% of progeny will have no horns.

Homozygous Polled
100% of progeny will have no horns.

Red Carrier
Carrier of the red gene coat colour.

Weanling
Sires proven to produce high value weanlings with excellent weight & muscle development at weaning stage.

Pedigree Royalty
A royalty fee applies to these sires when registering pedigree progeny. This is collected by the relevant breed society. No fee applies to commercial calves.

Pre-Order Sires
Semen from these sires must be pre-ordered.

Proof Pending
Awaiting more data.

Sexed Female
Available Sexed Female.

Finishing
Recommended for finishers to produce heavy, high grade, high value carcasses.

Sexed Male
Available Sexed Male.

IP Protected
NCBC IP Identified AI Sire. Pedigree breeders please refer to our T's & C's.

Replacement
Recommended to produce Replacements.

Our technicians will store privately owned straws for herdowners. While every care and precaution will be taken with privately owned straws, Progressive Genetics or our Technicians can not be held responsible for any loss or damage to these straws.

Progressive Genetics are committed to excellent semen quality and good on-farm fertility results.
Progressive Genetics will not be held responsible for the actual fertility achieved from the use of its products.

Dam of Gerrygullinane Archie (LM3101) as a calf.

GERRYGULLINANE ARCHIE

- No. 1 for Terminal Index - Archie ranks as the No. 1 bull available on Terminal Index, offering exceptional terminal performance and serious potential for commercial beef production.
- Expected to produce progeny with the shape, muscle, width and presence demanded by both weanling producers, show cattle enthusiasts & finishers.
- Backed by an exceptional dam line - Archie comes from a highly regarded cow family, adding further confidence in his ability to transmit quality and performance.
- A sire for serious cattle breeders - an exciting choice for breeders looking to add muscle, power, shape and value to the next generation.

- A stunning bull, Voltage topped the sale at the Premier sale in Roscrea in April '26
- Voltage is a picture perfect from head to tail, he has a beautiful head with tremendous length, thickness, style & breed character
- He is phenomenally interesting as he is heavily muscled and is not a myostatin carrier making him easy to use on most cows
- Comes from a proven dam line, his dam is maternal sister to the €13,100 Carrowneden Venice
- Outcross pedigree

GLENROCK REDEMPTION

Beef Cows - Conventional Semen FTAI Protocol

Administer	GnRH	PG	FTAI
Date			
Time			

Beef Heifers - Conventional Semen FTAI Protocol

Administer	GnRH	PG	PG	FTAI
Date				
Time				

Benefits of Synchronisation

1. All animals inseminated in the same day without heat detection
2. Much easier heat detection as repeats occur over 2-4 day period
3. Increases 3 & 6 week calving rate
4. Makes calving to weaning management much easier & facilitates sale
5. Allows calves to be grouped together

GnRH = Gonadotropin releasing hormone, PG = Prostaglandin injection, FTAI = Fixed-time AI, CIDR/PRID = Intravaginal progesterone releasing device

Maximise the success of AI in *Suckler Cows*

1. Cow must have an easy calving

Difficult calvings is one of the biggest causes of cows being slow to return to service.

2. Nutrition and BCS at calving

The higher the BCS at calving the quicker the cow will resume cycling post calving. A BCS of 2.5+ is ideal.

3. Requirements for cows to express normal heat activity

Adequate space is necessary to allow mounting for heat detection.

Increased stocking density indoors reduces heat expression and more false heats will occur.

4. Break the strong maternal- offspring bond

Cows must cycle within 55 days of calving to achieve one calf per cow per year.

Breaking the maternal bond will reduce the time to first heat by 4 weeks.

5. Avoid stress around the time of breeding

Avoid mixing cows from different groups during the breeding season especially 1st calved heifers.

6. Timing of insemation to maximise conception rates

The best time to inseminate is when animals are in standing heat and up to 12 hours after the end of standing heat.

7. Health

Ensure cows receive all vacinations 3 weeks prior to breeding.

8. Biosecurity

It's everybody's responsibility!

Maximise the success of AI in *Maiden Heifers*

Recommended target weight at 14 months		
Breed Target	Target (KG)	ADG birth to 14 months (Kg/day)
Angus X	370	0.77
Hereford X	370	0.77
Simmental X	400	0.85
Limousin X	420	0.88
Charolais X	430	0.9

Ensure that heifers meet the recommended target weights at breeding

This ensures

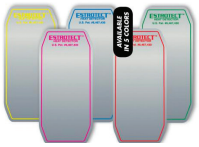

- The majority of heifers are cycling
- Heifers are well developed at calving & will calve easily
- Heifers are more likely to go in-calf within 60-80 days after their 1st calving.

Other Products

Brush Tail Paint:	Choice of colours	€14
Estrotect:	Rub-Off patches	Pack of 10, €22 Pack of 50, €90
Alpha Sheaths:	Easy AI on heifers	€8 per 50

Other Services

Liquid Nitrogen Servicing:

Full DIY A.I. Farm Flask Service throughout area. Progressive Genetics will service your farm semen flask at regular intervals 4 times per year. However, it is the responsibility of the farmer to check their flask on a regular basis to ensure there is adequate nitrogen in the flask. Progressive Genetics will not be held responsible if the flask runs dry.

If you are concerned with the level of nitrogen in your flask at any time please contact us on 0818 20 20 50.

Your AI flask and contents should be listed under your Farm Insurance

Several of our AI Technicians offer other services. See these abbreviations on full list over the page:

MR Mart Run (Calves)
HT Hoof Trimming

iML
Independent Milk Laboratories

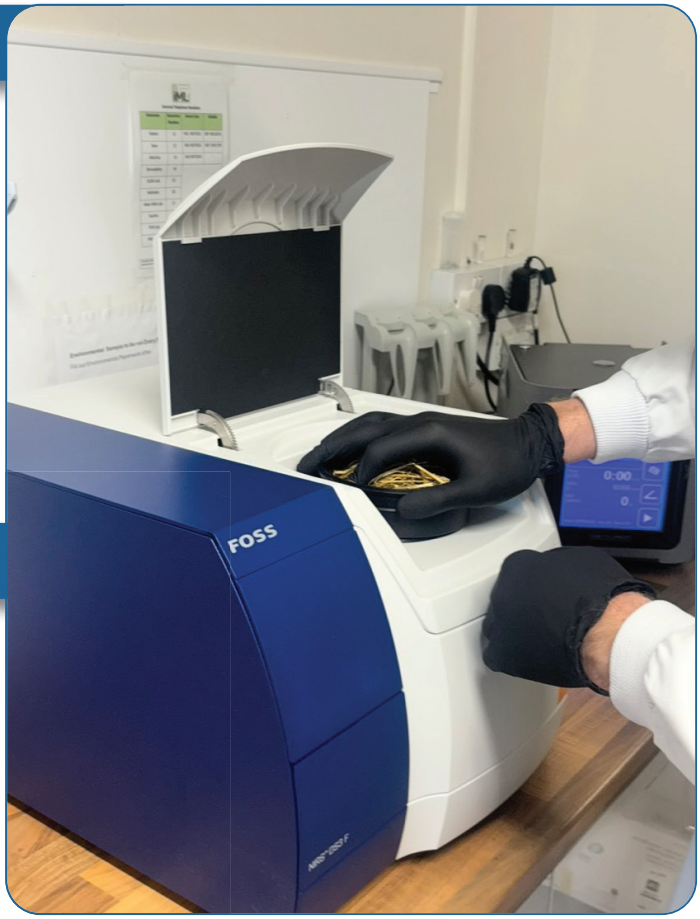

We offer a range of services that support better animal welfare, improved herd health management & protect the long-term sustainability of beef production.

Parasitology

Faecal Test kits available from Progressive Genetics' Laboratory IML allow you to make accurate & informed decisions on the need for treatments and the timing of those treatments.

Testing kits are available for purchase at www.imlabs.ie for:

- Worm Egg Count and Coccidia
- Rumen and Liver fluke
- Beef Welfare Scheme (BWS) Test Kits

Forage Testing

To ensure the feed quality of your silage is optimum and allow you to decide on the level of supplementation that may be necessary IML offers a forage analysis kit.

Kits including those for the BWS are available for purchase on the IML website www.imlabs.ie

iML HealthPlus+

HealthPlus

IML Healthplus is the only CHeCS approved Herd Health Scheme in the Republic of Ireland. CHeCS is an internationally recognised standard and IML Healthplus+ herds will be accredited to this standard.

Accreditation is available for Johnes, BVD, IBR, Neospora and Leptospirosis. IML will provide pen cards showing accreditation status for display at sales. We are also an AHI designated laboratory for BVD, Johnes and IBR also.

BVD

IML is an AHI approved BVD testing laboratory. We offer 24 hour turnaround on samples within the laboratory at very competitive prices.

Pre addressed envelopes are available for customers to return their samples.

For more information on our full range of services
Telephone: 042-9675353 Email: info@imlabs.ie

A.I. Technician Service: Professional, Reliable, Quality

Fertility performance you can trust. Technician & Semen fertility performance continuously monitored. Working to the highest professional standards. 363 days a year. **Call 0818 20 20 50** or contact your local technician.
